The Problem	The AI Solution
1. We have received thousands of calls for help in different languages.	A. Autonomous Drones: These can fly over flooded areas to spot people stranded on rooftops using cameras.
2. The roads are flooded and we don't know where people are stuck.	B. Predictive Analytics: Uses past weather data to calculate exactly which streets will flood first so we can close them.
3. We need to know which streets to close before the rain starts.	C. Natural Language Processing (NLP): Instantly translates calls into Arabic for the police dispatchers.
