MATCH THE CONCEPT WITH ITS CORRESPONDING DEFINITION.

Mammal		organisms not able to be seen except under a microscope, found in rotting matter, in air, in soil and in living bodies, some being the germs of disease
Dinosaur		a very large type of animal that used to live millions of years ago
Bacteria		an animal whose body is covered with scales and whose blood changes temperature
Reptile		any member of the class of animals (including man) in which the females feed the young with their own milk
Insect		a type of animal with no spine, a hard outer skin, legs with bones joined together, and a body divided into different parts, for example a spider, crab, or ant
Arthropod		an animal that lives both on land and in water but must produce its eggs in water
Amphibian		a small creature with six legs, for example a bee or a fly
