ORDER THE JOURNEY OF BLOOD AROUND THE BODY

☐ The heart pumps, and **the blood without** (sin) **oxygen** goes to the **lungs**.

☐ **The blood without oxygen goes back to the heart** through cava vein.

☐ The heart pumps again and **the blood with oxygen and nutrients** goes out through aorta artery to all **the organs** in our body.

☐ **In the lungs**, the blood **takes the oxygen** and **goes back** (Vuelve) **to the heart** through a vein.

☐ **Inside the organs**, we have capillaries. Through these **capillaries**, the blood drops off (suelta) the nutrients and the oxygen in the organs.
