Rivers and watersheds in Europe

1- Look and choose.

2- Look at the map. Choose rivers from each watershed (from east to west).

Mediterranean watershed	Rivers have a low and irregular flow because of droughts in summer.	P R E
Atlantic watershed	Rivers have the highest flow in Europe since they run through areas with abundant rainfall.	W V O E R L T
Black Sea watershed	Rivers are very long with a high flow, so they are navigable by boat.	D D D
Arctic watershed	Rivers in this watershed have a very high flow, and they freeze in winter.	P N
Caspian Sea watershed	Rivers in this watershed are long with a high flow, including the longest river in Europe.	V

Dnieper, Dniester, Danube, Northern Dvina, Western Dvina, Ebro, Elbe, Loire, Oder, Pechora, Po, Rhine, Rhone, Tajo, Vistula, Volga
