

The Importance Of Eco-Friendly Environment

An article written by James Smith

We are all aware of the literal meaning of the word eco-friendly. The world have evolved into a global village where pollution, disasters, diseases have spread to a maximum range. In this type of chaos, it is very necessary to preserve the earth and the living things that exist on it. As human beings and the dwellers of Mother Nature we have forgotten that we serve a responsibility to earth and by that it means keeping it safe and protecting its environment from such events. These issues have grown to a much greater extent and in contrast with this, the concept of eco-friendly or going eco-friendly has progressed. In order to recognize this very concept we first need to understand that why do we need to go eco-friendly? The reasons can be many but the major ones are as follows:

ENVIRONMENTAL PROBLEMS

This is one of the major concerns that our world is facing nowadays. It can be related to cutting down of trees, limiting supplies, exploitation of natural resources etc. Even the water today in most of the localities is not fit for drinking as most of the industries omit toxic material and waste material into pure water. They not only damage the purity of the water but also kill the marine life.

EROSION

It can occur for several reasons and causes a lot of damage to the earth environment. It can be caused by over development of land for construction purposes or housing purposes, extreme weather conditions etc.

POLLUTION

Pollution is a very common problem which we all are aware of. The main reason which causes pollution is the smoke that is omitted from the car, factories and industries. There are three types of pollution namely water, air and land pollution and sadly we are the victim of all three of them.

In contrast with the above problems, let's discuss the importance as to why going eco-friendly is important in today's world. **Our planet is nearly dying because of the situation we have put it in.** The ozone layer is damaged. In order to save our planet we need to promote self-sustainability and self-sufficiency. Our purpose should be to promote a greener and healthier environment. Furthermore, in order to promote the very concept of eco-friendly we can always use eco-friendly products which include Hybrid Cars, Fuel less Generators, Solar Power Generator, and Eco-Friendly Air Conditioners etc. Using eco-friendly products will not temper with your use or productivity but make it more efficient and effective.

On the other hand, one might wonder the benefits of going eco-friendly. As a matter of fact, there are many of them. They can be elaborated as follows:

LOWER COST

It is true that purchasing an eco-friendly product will cost you less than purchasing a normal one. In this way you will be using your money in an effective manner.

HEALTHIER LIFESTYLE

Eco-friendly products for that matter guarantee you with a promise of healthier lifestyle. It will even improve the environment and in return will provide you with ample of benefits.

SUSTAINABILITY

The main aspect of going eco-friendly is about sustainability. Since the world is corrupted with pollution and toxic amount of materials, making it sustainable can be a good call.

QUALITY OF LIFE

Going eco-friendly also improves your quality of life in terms of mortality, age, diseases etc. You might have a better shot at living a quality life with health if you chose to go eco-friendly.

DEVELOPMENT

One of the other factors is development. We believe that development comes from construction, ideas, innovation and strategies; but how about turning all our goals and aligning it with the environment. It will not only benefit you but the environment as well.

To put it into simple and a realistic scenario; millions of tons of materials is gone to waste every day, industries omit toxic chemicals in the oceans everyday making it harder for the marine life to live a quality life, smokes are omitted from cars and factories and thousands of trees are cut. We are exploiting our own nature without bearing in mind that what will possibly happen in the future. However, if we decide to choose an alternative path, we can always save what we have lost.

READING COMPREHENSION

The importance of Eco-Friendly enviroment

1. Explain in less than three lines the general idea of the article.

2. What problems have led to the need of being eco-friendly?

3. Name the actions that we can do to become more eco-friendly.

4. **Read the sentence in gold.** What is the situation that is talking about? Do you know from people around you that does anything mentioned in the article?

5. What eco-friendly tools would you use in your house? Do you already use any? Which one?

6. What can you do to become more eco-friendly?

7. Why do you think becoming eco-friendly improves the quality life?
