Quantitative

Qualitative

1. Drag and drop the type of data in each question of interest:

a) What are the intermediate students' favourite subject?

c) What is the most popular type of ice cream flavour?

b) What is the average amount of precipitation in Arizona?

d) What is the percentage increase in sales from last month?

Quantitative

Qualitative

2. Drag and drop the type of data in each question of interest:

a) How many pets do your friends have?

c) How many devices does your household have?

b) What colour is the soil during a 2 week period?

d) What is your favourite drink?

LIVEWORKSHEETS

Stratified random sampling occurs when...

- a population is subdivided (grouped) into smaller subgroups
- a portion of the population is obtained in a way that each subject (people, object, species) has an equal ch...
- a portion of the population is systematically chosen (for example, every 5th person from a list)

Systematic random sampling occurs when...

- a population is subdivided (grouped) into smaller subgroups
- a portion of the population is obtained in a way that each subject (people, object, species) has an equal ch...
- a portion of the population is systematically chosen (for example, every 5th person from a list)

Simple random sampling refers to a type of sampling where...

- a population is subdivided (grouped) into smaller subgroups
- a portion of the population is obtained in a way that each subject (people, object, species) has an equal ch...
- a portion of the population is systematically chosen (for example, every 5th person from a list)
