Find the value of y if $x = 4$.

1) $y = 2x + 1$

$y = 2(\square)+1$

$= \square + 1$

$y = \square$

2) $x = 2y + 1$

$\square = 2y+1$

$2y+1 = \square$

$2y = \square$

$y = \dfrac{\square}{\square}$

How did you find the value of y in the 2nd item?
