Uses of metals and alloys

Below each picture, use the drop-down boxes to select the **name** of the metal and the **reason** why that metal is used in this application. The extension question has no drop-down boxes!

Extension task

The picture shown here is of the Statue of Liberty in New York, USA.

The statue has been exposed to the weather and has an obvious green colour – but it was not always green.

Use your knowledge of metals, or Internet research, to discover what metal was used to make this statue. Also explain why this particular metal was chosen.
