4. Read the text and find the correct information to label the pictures.

Environmental Technology

Value: Environmental and health care

Protecting our planet is everybody's responsibility. We can start by applying RRR: recycling, reusing and reducing our own waste.

Most people think that our world and its environment is being destroyed by the technological devices that generate lots of waste and pollution. However, environmental technology is actually helping us in so many different ways. Not only our planet, the Earth itself, but the animals and all living beings benefit from it. An example is the paper waste reduction because of the use of memory drives or virtual clouds to keep documents, books and photographs. Another example is the clean renewable energy obtained from the wind and the sun that replaces fossil fuels. In agriculture, the robotic farming permits us to monitor the fields and livestock efficiently.

5. Read the text again and choose true or false.

a) Most people don´t think that our world and its environment is being destroyed by the technological devices.

b) In agriculture, the robotic farming permits us to monitor the fields and livestock efficiently.
