The eye

1. Match the parts of the eyes and their function:

Pupil	Protects the eye and spread tears around to keep the eyeball and the socket moist and clean.
Optic nerve	Coloured part of the eye.
Eyelid	Dark opening in the middle of your eye, surrounded by the iris.
Cornea	Specific part of the clear conjunctiva and covers the iris and the pupil.
Iris	It connects to the brain and carries important electrical signals.

2. How the eyes work. Put the stages in the right order.

	Light hits the **retina.**
	Light passes through the **lens**.
	Light passes through the **cornea.**
	These electrical signals travel from the retina through the **optic nerve** to the brain.

3. Complete the following sentences dragging the words from the box.

eyelashes **lacrimal glands** **eyebrows** **eyelids**
