Monarch Butterflies
In Danger of Extinction

Monarch butterflies drink nectar from plan's flowers. Today, many people plant gardens to attract these beautiful butterflies.

Some people however, cause problems for Monarchs. They pull and dig up milkweed plants. Why is this a problem? Monarchs only lay their eggs on milkweed plants. Milkweed is what the monarch caterpillars eat.

How can people help?

can help the Monarch by leaving milkweed plants in their garden. Many schools even plant milkweed to attract Monarchs when it is time for them to lay their eggs. Planting milkweed is a big success in Bermuda. There the Monarch population has increased.
