4. Dan *can* / *can't* use a laptop.

LIVEWORKSHEETS

3. Read and complete with the information from the chart.

The first computers were people. The word "computer" described people who used calculators to solve math problems. These calculators, or calculating machines, appeared in the 1800s. They were large, heavy machines with motors and keys.

The first machine similar to a modern computer was the Z1. A German scientist named Konrad Zuse built it in 1938. In 1945, American scientists produced the ENIAC, a computer that weighed as much as four elephants. People used computers for business and government work.

In 1962, Steve Russell invented the first computer game. In 1964, the computer mouse got its name and in 1969, the Internet was born. But most people didn't know about or use computers at that time. Personal computers appeared in 1983. Web browsers, such as Internet Explorer™, became popular in the 1990s.

Computer from 1980.

Computers continue to change and develop, connecting people in new and amazing ways. What will computers look like in 50 years?

One of the first personal computers (PC).

Personal computers appeared.	**1964**	Steve Russell invented the first video game.	Web browsers became popular.
	A German scientist built a computer named Z1.	**1945**	The internet was born.

1800s	People used calculating machines.
