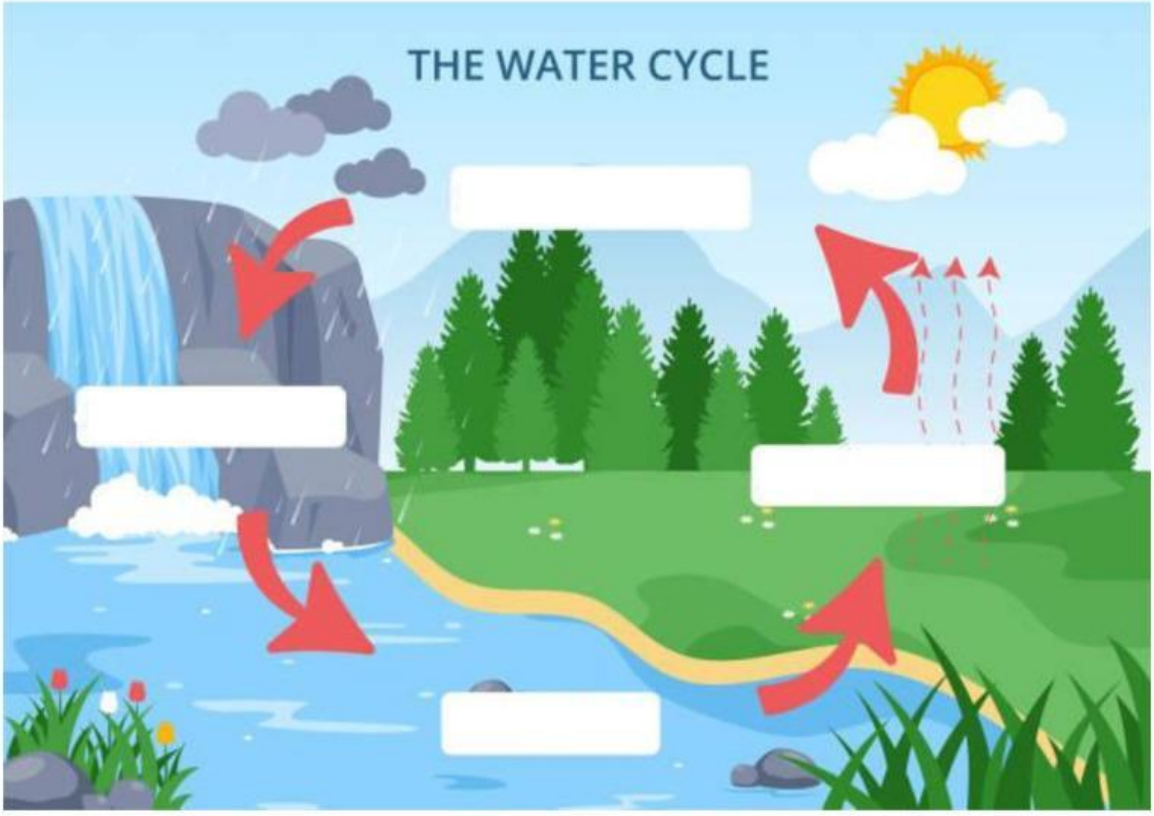
Label each process to complete the diagram of the water cycle:

Evaporation	Collection	Precipitation	Condensation



Choose the correct answer:

1- The energy that powers the water cycle comes from …….(the Earth – the Sun – the Moon)

2- When water evaporates, it changes from liquid water into……..(clouds-snow-water vapor)

3- The wind blows. The clouds get heavy and cool. Water falls from the clouds. This is called …… (condensation – evaporation – precipitation)

4- Gas changes into puffy clouds, this is …….. (condensation – evaporation – precipitation)
