arrange the jumbled paragraphs into a complete and coherent report text.
After reconstructing the text, analyze it by completing the worksheet with the following tasks:

1. Identify the text structure (General Classification and Description).
2. Underline at least three simple present tense
3. Highlight at least two passive voice
4. Highlight at least three technical terms
5. Highlight at least three examples of general nouns related to the topic.

This bird lives in tropical forests and savannas. It typically feeds on insects, fruits, and seeds.

The Bali Starling is critically endangered due to habitat destruction and illegal wildlife trade. Conservation programs include captive breeding and reintroduction into protected areas. International and local efforts continue to protect this elegant bird and restore its population in the wild.

Bali Starlings are monogamous and nest in tree cavities. They are known for their soft, whistling calls and social behavior. Despite their beauty, the population of this species has declined sharply.

BALI STARLING

The Bali Starling (Leucopsar rothschildi), also known as the Jalak Bali, is a rare bird native to the island of Bali, Indonesia. It is recognized for its striking white feathers, blue skin around the eyes, and a wispy crest. The Bali Starling is the only bird species endemic to Bali and is considered the island's official fauna symbol.
