The Mystery of Bird Migration

Every year, millions of birds fly thousands of kilometers to escape the cold winter. This incredible journey usually starts **6**___ autumn when temperatures begin to drop. Many species fly **7**___ massive clouds and mountains, crossing entire continents without getting lost. Biologists believe that their ability to navigate depends **8**___ Earth's magnetic field and the position of the sun. Some smaller birds prefer to travel **9**___ night to avoid dangerous predators. Scientists who are interested **10**___ animal behavior use small satellite tags to track these spectacular flights.
