Every scientist dreams to ..... something and gain world ..... , but this way is not as easy as it seems. As a rule, everything starts in childhood when a child appears to have an ..... for physics or chemistry. Soon an adult sees the child's great ..... and helps him develop it. The child studies hard having ..... to different sources of information. Doing different projects, the gifted child grows in to a big-head student who receives a ..... . His teachers ..... him with being ..... the Noble prize very soon. This student ..... a new term in science and gives a lot of lectures to make the science society ..... his achievements and win the ..... . Step by step, this student is becoming a great ..... In his sphere and making a great .... science development. The streets and schools are ..... after him. New generations of scientists make ..... to his works and hope to follow his way.

1. write down the branches of science:

1. It explores the space and solar systems, galaxies and stars.
.....

2. it conducts experiments using acids, bases and other substances.
.....

3. it observes the structure of Earth predicting earthquakes or relief changes
.....

4. it calculates the velocity, gravity and power, relativity, explaining the life on the Earth.....

5. it digs and analyses artifacts formulating various hypotheses of our past.....

6. This science is the most accurate and is considered to be the queen of science.....

7. it learns stems, roots, leaves and buds, flower etc.
.....
