

Listening and Reading

A. Listen and complete the summary of the Reading text. Write one Word in each space.

There are two kinds of numbers: simple numbers, or cardinals, and _____. We use ordinal numbers when we talk about the _____ of things. We also use them in _____ like *October the eleventh*. Ordinals are normally the _____ number plus *th*; for example, six — *sixth*. However, the cardinal numbers *one*, *two* and *three* have special ordinal words: *first*, *second* and _____.

B. Read and label the picture. Use the words and phrases in the box.

rod bead tens column units column hundreds column

1 _____	4 _____
2 _____	5 _____
3 _____	

An abacus is an ancient device for doing simple arithmetic. There are many kinds, including the Chinese abacus. With an abacus, you can add, subtract, divide and multiply. An abacus has vertical rods with beads in a frame. A horizontal beam separates the top deck from the bottom deck. In the Chinese abacus, the top deck has two beads on each rod. The bottom deck has five beads on each rod. Each bead on the top deck has a value of 1. Each bead in the bottom deck has a value of 1. The operator moves each bead in the bottom deck towards the beam. When the operator has moved a 1 five beads, he moves one bead in the top deck towards the beam then repeats the process and moves the second bead. The first rod now shows the number 10.

C. Listen again and complete the summary. Write one Word in each space.

An abacus is an ancient device for doing simple _____ – add, subtract, divide and _____. An abacus has vertical _____ with beads in a frame. A _____ beam separates the two decks. In the Chinese abacus, each _____ on the top deck has a value of five. Each bead in the bottom deck has a value of _____. The operator _____ the beads as he is counting.
