Needle insertion

a needle long enough to reach deep into the muscle.

needle at a 90° angle to the skin with a quick thrust.

(If administering an injection of vaccine, aspirate, i.e., to pull back on the syringe plunger after needle insertion.⁹)

Multiple injections given in the same extremity should be separated by a minimum of 1", if possible.

⁹ CDC. "General Best Practices Guidelines for Immunization: Best Practices Guidance of the ACIP" at <https://www.cdc.gov/vaccines/>

Intramuscular (IM) injection site for infants and toddlers

IM injection site (shaded area)

needle at a 90° angle into the anterolateral thigh muscle.

Intramuscular (IM) injection site for children and adults

in the central and thickest portion of the deltoid muscle – above the level of the armpit and approximately 2–3 fingerbreadths (~2") below the acromion process. the diagram. To avoid causing an injury, do not inject too high (near the acromion process) or too low.
