

AMAZING DIETS

Most **sea turtles** are omnivores because they eat animals and sea plants. They **feed on** squid, crabs, fish and jellyfish, but they also eat **seagrasses** and algae.

Green sea turtles are an exception because they are herbivores.

Ravens are omnivores because they eat live and dead animals and plants. They love eating **carrion**, fish, amphibians, reptiles, small mammals (mice), arthropods (scorpions) and the eggs of other birds. But they also feed on **seeds** and grain.

Gorillas are herbivores because they have a vegetarian diet. They live in jungles and they feed on different types of plants. Gorillas eat leaves, flowers, **stems**, **roots**, branches, seeds and fruits.

Some types of gorillas also eat termites and ants.

VOCABULARY

feed on: alimentarse de

seeds: semillas

seagrasses: hierbas marinas
