

Vegetarians

Vegetarians do not eat meat or fish. They eat vegetables, fruit, leaf greens, nuts and grains like rice and flour.

In order to save animals, many people are becoming vegetarians. The research shows that vegetarians have lower chances of getting diseases than meat eaters. In addition, vegetarians are also helping environment and world starvation problem. This is because it takes less water, land and energy to grow plants and crops than raising animals.

In order to avoid the risk of illnesses by eating meat, people can reduce the amount of meat to consume. In other words, eat less than eat-never. For example, one can eat meat only once or twice a week instead of eating it every day.

Well-balanced diet

Well-balanced diet means eating a variety of food. Eating only vegetables or only meat could cause malnutrition. Although it is said that people who eat meat has higher risk of getting illnesses than those who do not eat meat, lack of nutrition contained in meat could also cause health problems, because some vitamins can be taken more easily from meat than vegetables.
