Tentukan hasil pengurangan pecahan dibawah ini sampai paling sederhana !

$$1 \quad \frac{2}{3} - \frac{1}{3} = \frac{\square}{\square} - \frac{\square}{\square} = \frac{\square}{\square}$$

$$4 \quad \frac{3}{5} - \frac{2}{5} = \frac{\square}{\square}$$

$$2 \quad \frac{5}{7} - \frac{2}{7} = \frac{\square}{\square} - \frac{\square}{\square} = \frac{\square}{\square}$$

$$5 \quad \frac{5}{8} - \frac{2}{8} = \frac{\square}{\square}$$

$$3 \quad \frac{10}{17} - \frac{3}{17} = \frac{\square}{\square} - \frac{\square}{\square} = \frac{\square}{\square}$$

$$6 \quad \frac{7}{9} - \frac{5}{9} = \frac{\square}{\square}$$

contoh :

$$\frac{1}{2} - \frac{2}{5} = \frac{(10:2) \times 1}{10} - \frac{(10:5) \times 2}{10} = \frac{5 \times 1}{10} - \frac{2 \times 2}{10} = \frac{5 - 4}{10} = \frac{1}{10}$$

KPK 5 dan 4 = 10

Tentukan hasil pengurangan pecahan dibawah ini sampai paling sederhana !

$$1 \quad \frac{3}{5} - \frac{1}{3} = \frac{(\square:\square) \times \square}{\square} - \frac{(\square:\square) \times \square}{\square} = \frac{\square \times \square}{\square} - \frac{\square \times \square}{\square} = \frac{\square - \square}{\square} = \frac{\square}{\square}$$

KPK 5 dan 3 = $\square$

$$2 \quad \frac{7}{8} - \frac{3}{4} = \frac{(\square:\square) \times \square}{\square} - \frac{(\square:\square) \times \square}{\square} = \frac{\square \times \square}{\square} - \frac{\square \times \square}{\square} = \frac{\square - \square}{\square} = \frac{\square}{\square}$$

KPK 8 dan 4 = $\square$

$$3 \quad \frac{3}{4} - \frac{5}{9} = \frac{(\square:\square) \times \square}{\square} - \frac{(\square:\square) \times \square}{\square} = \frac{\square \times \square}{\square} - \frac{\square \times \square}{\square} = \frac{\square - \square}{\square} = \frac{\square}{\square}$$

KPK 4 dan 9 = $\square$

$$4 \quad \frac{5}{6} - \frac{7}{9} = \frac{(\square:\square) \times \square}{\square} - \frac{(\square:\square) \times \square}{\square} = \frac{\square \times \square}{\square} - \frac{\square \times \square}{\square} = \frac{\square - \square}{\square} = \frac{\square}{\square}$$

KPK 6 dan 9 = $\square$

$$5 \quad \frac{6}{7} - \frac{6}{8} = \frac{(\square:\square) \times \square}{\square} - \frac{(\square:\square) \times \square}{\square} = \frac{\square \times \square}{\square} - \frac{\square \times \square}{\square} = \frac{\square - \square}{\square} = \frac{\square}{\square}$$

KPK 7 dan 8 = $\square$
