

Reading IV

● Natural Disaster

Wildfires are large fires which start in wildland areas.

One of the biggest wildfires in history was in the rainforest, which lasted for months. In 2019, between 15-17 percent of the rainforest was lost because of wildfires.

Wildfires can be started through many methods. Lightning and droughts are the most common, but wildfires can also be started by humans as well. Wildfires spread and grow quickly and can be a threat to any areas with lots of plants. Wildfires are hard to stop, sometimes it is impossible for firefighters to fight it.
