

Computer Components

- Let's identify the Components of a Computer

A computer is a unit, which consists of many parts. We can categories those parts into components according to the nature of the functions they do.

- Input Devices
- Output Devices
- Central Processing Unit
- Main Memory
- Storage Devices
- Communication Devices

1. Input Devices

The devices which are used to enter data and instructions to computers are called input devices.

Mouse

Keyboard

Microphone

Web Camera

Barcode Reader

Scanner

2. Output Devices

The devices which are used to retrieve the data and information are called output devices.

Computer Monitor

Printer

Speaker

Multimedia Projector

3. Central Processing Unit (CPU)

Controlling the computer and processing data according to the given instructions are done by the Central Processing Unit. The Central Processing Unit is located inside the system unit. It cannot be seen from outside.

System Unit

Mother Board

Central Processing Unit

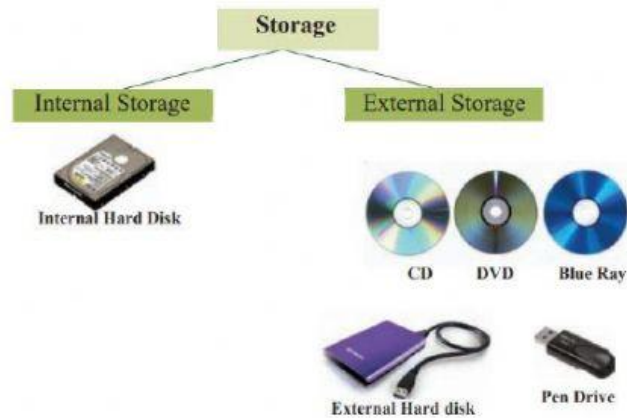

4. Main Memory

The device which is used to store data, information and instructions temporarily is identified as the main memory or the primary memory. It is also called the Random Access Memory (RAM).

5. Storage Devices

The devices which are used to store data, information and instructions are called storage devices.

6. Communication devices

The devices which are used to exchange the processed data and information are called communication devices.

1. Match the correct answer
