- Pull
- Turn the key

How to Start a Motorcycle:

1. Get on the
2.the key in the ignition of the motorcycle.
3. Locate and the fuel petcock. Some motorcycles don't have a need for this step.
4. the choke all the way out unless the motorcycle has been running previously.
5. in the ignition to the ON position.
6. Make sure the kill switch of the motorcycle is set to
7. Make sure the motorcycle gear shifter is in
8. the motorcycle clutch lever with your left hand all the way to the grip.
9.the start button with your right thumb.

10. the starter motor Turn over until the engine fires before you release the start button.
11. The motorcycle engine should be at a fast idle.
12. Over a period of a few minutes, gradually push the choke in as the motorcycle engine
13. You have started the motorcycle and areto go!

Tips:

1. If the motorcycle engine fires and then immediately stalls, just press the start button again until it fires a second (or third) time.
2. If engine does not start, recheck the kill switch and the fuel petcock.
3. Modern motorcycles will stall if you attempt to put the bike in gear while the side stand is down.
