

Reading paper

The software used to open websites & web pages on the internet is the **web browsers**. Google chrome, Mozilla Firefox, Internet Explorer are examples. We use web address to access websites.

When you access the internet what do you do when you do not know the websites where you need to find information?

It has a one solution. Search engines can be used for this.

Do you know what search engines are? Search engines are software used to find information that gives you a list of websites that are relevant to what you are looking for.

Relevant words or phrases can be used to find information. A web browser is required to use a search engine. For example in search engines Google, Yahoo, Bing.

Getting information from a list of websites it is your responsibility to choose the right websites.
