- Your **signature to end the letter**.

C. Soal

Exercise :

Answer the following questions based on the text by clicking option a, b, c, d, or e.

The use of formalin and other dangerous preservatives in food has been serious problem for three reasons. Firstly, formalin is not for human beings, but it is for biological specimens and experiments. Formalin in Biology is a 10% solution of formaldehyde in water which is usually used as a disinfectant or to preserve biological specimens. Thus, it is not for food preservatives. Of course when it is used for food preservative, it will be very dangerous to human's body.

The second reason is that there is no tight control from the government. This condition makes the people's health is really in a threat. When the control is weak and the use formalin was spread wide all over the Indonesian regions, and these days it has really happened, the citizen's bodies will be badly contaminated with the poisons. Fish or food traders still sell their products which contain formalin and dangerous preservatives. Can you imagine that our digestive system absorbs the substance that should be for the human and animal corpses?

Considering the reasons, we can make a conclusion that the use of formalin and other preservatives is really a serious problem if it is not resolved immediately.

1. The main idea of paragraph one is.....

- A. The use of formalin and other dangerous preservatives in food
- B. The human's bodies will be harmful after consuming the formalin
- C. The weak control of using formalin is not threatening the human
- D. The human's bodies will be harmful after consuming the formalin
- E. Formalin is not harmful

There is no best way to deal with pests in agriculture. Pesticides which are commonly used may cause many problems. I think combining different management operations is the most effective way to control pests.

Firstly, the chemicals in the pesticides may build up as residues in the environment and in the soil which absorbs the chemicals. This reduces the quality of farm product.

Secondly, pests can gradually become resistant to pesticides. This means that newer and stronger ones have to be developed.

Lastly, some pesticides affect non target plants and animals such as fish and bees. This affects the ecology and environment as well.

So, understanding of ecology of an area helps a lot in pest control. Pesticides should be chosen and applied carefully so that they don't affect the ecological balance and environment.

Therefore, integrated pest management is a safe and more effective option to fight pest in agriculture and livestock.

2. What can you say about paragraph two and four?

- A. The fourth paragraph supports the idea stated in paragraph two.
- B. Both paragraphs tell about the disadvantages of using pesticides.
- C. Both paragraphs tell about how pesticides affect the quality of farm products.
- D. The statement in paragraph is contrary to the statement in paragraph four.
- E. The second paragraph tells about the effects of using pesticides on animals mentioned in paragraph four
