ใบงานโครงสร้างและหน้าที่ของพืชดอก

1. ให้นักเรียนเติมชนิดเนื้อเยื่อจากภาพที่กำหนดให้

A detailed micrograph of a plant stem cross-section. The central part shows a vascular cylinder with a distinct ring of large, thin-walled cells, likely the endodermis. Surrounding this are various vascular tissues, including xylem and phloem, stained in different colors (purple, green, and brown) to highlight their structures. The outer layers of the stem are also visible, showing the epidermis and cortex.
