2.2.4 The drug that makes a patient to go into a very deep sleep so that s/he cannot feel the pain is called …

A antibiotics.
B penicillin.
C anesthetics. (1)

2.3 Study the source below and answer the questions that follow.

Case study:

THE BUCHU PLANT A HEALING MEDICINE

Western companies are continually discovering more and more pharmaceutical uses for indigenous plants. A plant called Buchu has been used by herbalists to cure stomach and bladder troubles for hundreds of years. Today there is strict control over the gathering of Buchu leaves. This is to prevent people from completely destroying these wild plants. No-one is allowed to pick Buchu without license today. Buchu leaves are collected by commercial farmers while the plants are flowering. The leaves are dried and exported from Cape Town. Most of the exports are sent to England and the United States of America where the dried Buchu leaves are used in many medicines in the form of liquids, ointments or tablets. More than fifty percent of all drugs used in the world today contain extracts from plants.

2.3.1 What is Buchu used for? (1)

2.3.2 Is this an example of indigenous or western medicine? Why? (2)

2.3.3 Why is there strict control over the gathering of Buchu leaves? (2)
