

## Problems with storage devices

Sultan and Mariam are learning about storage devices. Sultan wants to test Mariam's knowledge on what she has learnt.

Help Mariam to complete the activity that Sultan has created for her.

A Hard Disk Drive, also known as a \_\_\_\_\_, is an example of a storage device. Other examples of storage devices include flash memory drivers, SD card and \_\_\_\_\_. When files and folders become invisible on a Hard Disk Drive, it means that there could be a \_\_\_\_\_ failure inside the moving parts of the Hard Drive. There are many reasons for why this could happen, but the main reasons are because of a fall, or because of the \_\_\_\_\_ of the computer. If a computer starts to lag or freeze, it could be due to a virus or \_\_\_\_\_ attack on the HDD or SD.
