

Match the dinosaur and its description.

T-REX

Its full name is Tyrannosaurus Rex: it is the terrifying "King" of all the meat-eating dinosaurs! It has two very little arms and a huge head. Not a very nice fellow to meet...

DIPLODOCUS

The Diplodocus is not dangerous to humans because it eats only plants. It needs a lot of food to live! It has spines along its neck and has a very long tail.

PTERANODON

The Pteranodon has a long and very strong beak, and a big head crest. It flies over the sea and eats fish and small sea creatures.

TRICERATOPS

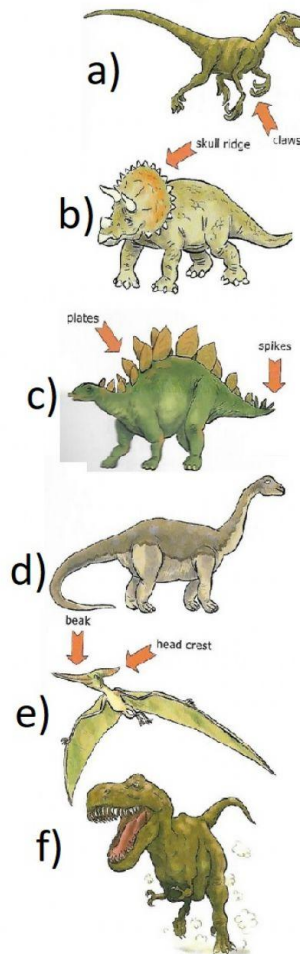

Its name means "three-horned head". It has a very strong skull ridge for protection. It may look scary, but in fact it does not eat other animals, only plants.

STEGOSAURUS

It is approximately the same size of a modern elephant. It is not very intelligent because it has a little head and brain. It has a line of bony plates along its back and long spikes on its tail.

VELOCIRAPTOR

The Velociraptor is a very dangerous meat-eater. It is small in size but can run very fast. It has scary claws like feet to use against bigger animals, and a long, rigid tail.

Answer "what is this?" and "what is that"?
