

CHEMISTRY WAS EASIER THAN MATH

1. Read the text and answer the comprehension questions.

I hated school when I was young. I always thought it was the worst thing that could exist. However, there were some subjects that I was good at even though I didn't like them.

In high school, I always listened to my classmates say that Chemistry was the most difficult subject because of all the things that they had to learn, but I didn't think that. I was good at Chemistry, I didn't have problems learning all the laws, formulas, or elements. I was able to understand everything my teacher explained. To be honest, I guess that I liked Chemistry because my teacher was really pretty; I had a crush on her.

Another subject that I didn't like but caught my attention was History. Everybody would think that History is the most boring subject but with my high school teacher, it was totally the opposite. He never taught us dates, he explained the complete event and then, he made us think about the significance of the event. The social consequences it provoked, the real meaning of the different movements. Believe me when I tell you that teacher made History the most interesting class of the day. But well, even though I didn't have problems understanding the explanations of both classes, I wasn't able to pass both subjects. At the end, I had to take an extraordinary exam for both subjects, I failed them because I overpassed the number of absences.

1. Did the man like school?

2. What were the subjects he was good at?

3. Did the man struggle learning Chemistry?

4. Why does he think he was good at Chemistry?

5. Why does the man think History class was the most interesting?

6. Was the man able to pass both subjects?

7. Why did he fail both subjects?
