

# Capacity

capacity = volume  
capacity is how much liquid an object holds

Mass is measured using a measuring jug

We use

- MILLILITERS ml

- LITRES L

1000 ml = 1 Litre

**To convert mls to L - divide by 1000**

**To convert L to mls - multiply by 1000**

eyedropper 1 ml

a glass of water

250 mls

a can of coke

375 mls

a bottle of milk

1L

1 bucket of water

15L

Mark the correct answer with a X

What is the best estimate for the capacity of a glue cap?

300 L                    30 L                    30 ml                    300 ml

What is the best estimate for the capacity of a bucket?

20 L                    200L                    20 ml                    200 ml

What is the best estimate for the capacity of a plastic cup?

300 L                    30L                    30 ml                    300 ml

What is the best estimate for the capacity of a saucepan?

100 L                    10 L                    10 ml                    100 ml

What is the best estimate for the capacity of medicine cup?

40 L                    4L                    4 ml                    40 ml

What is the most appropriate unit to measure the volume of sandpit?

M                            KG                            L                            M<sup>3</sup>

What is the most appropriate unit to measure a babies' bottle in?

ml

g

cm

cm<sup>2</sup>

What is the most appropriate unit to measure the area of box covers?

cm

mg

ml

cm<sup>2</sup>
