

POLLUTION IN THE FUTURE

Catastrophic Impact of Air Pollution in the Future

The impact of increasing air pollution is more dangerous than you think. If air pollution is not controlled, by 2030 the air will become so poisonous that it will be necessary to use an oxygen kit to breathe easily. Rising air pollution will also lead to premature aging. Human exposure to air toxins will increase to a great extent if air pollution is not controlled. The Environmental Protection Agency states that exposure to pollutants is directly linked to cancer and heart disease.

Answer the questions

The increasing of pollution it is a problem?

- Yes, it is.
- No, it isn't.
- Maybe.

What will be necessary used by 2030 if air pollution is not controlled?

- Masks.
- Oxygen kit.
- Breathe.

Exposure to pollutants what may cause?

- Cancer and heart disease.
- Breathing difficulties.
- Aging.
