Date of Birth:

Date:

Subject: Interdisciplinary Unit

Topic: Invertebrates

Invertebrates are animals **without** backbones (spines). Some invertebrates have exoskeletons. An **exoskeleton** is a hard outer covering that protects an animal's body and gives it support.

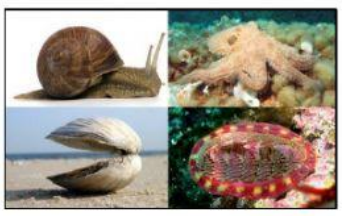

Examples of invertebrates: jelly fish, sea anemones, worms, mollusks, sponges, starfish, sea urchins, and arthropods (insects, spiders, centipedes, millipedes).

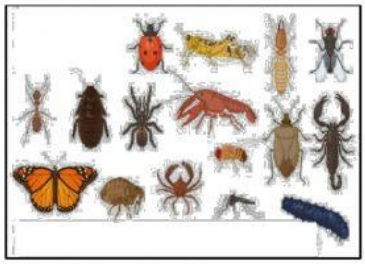

jellyfish

worms

mollusks

arthropods

sponges
