d) Glare, sky glow, light trespass,
over illumination

5. Noise pollution

e) Dump toxic chemicals, oil spill,
domestic waste

6. Soil pollution

f) Fertilizers, pesticides, plastic,
deforestation

II. LABEL THE PICTURES.

Litter

Pesticides

Deforestation

Traffic

Wildfire

Electricity wires

Sky glow

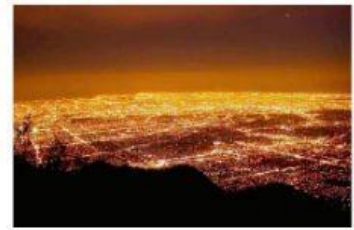

Burning fossil fuels

Construction work

Oil spill

Landfill

Toxic waste

III. CHOOSE THE RIGHT CONCEPT.

Say no to products that you don't need or that you will use once. If you don't use them, you produce less trash.

Don't buy by impulse, buy only what you need. Think about the pollution generated to produce what you use, so try to consume less.

Try to use your belongings as much as you can. It is easy for us to buy new things even if the ones we have are still in good shape.

Don't send to the landfill the old or broken things. Some of them can be restored and be functional, so you avoid acquiring new stuff.

There are some materials like glass, aluminum, or metal that can be transformed in new objects. Keep them and take them to companies that make the process.
