

PERIMETER: MISSING SIDE OF A SQUARE

Find the missing length or width (breadth) of the figure using its given perimeter.

Example

Perimeter = 36m

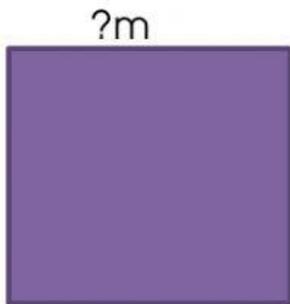

$$\text{Perimeter square} = 4 \times \text{length}$$

$$36\text{m} = 4 \times \text{length}$$

$$\text{Length} = 36\text{m} \div 4 = \underline{9\text{m}}$$

Length of square = 9m

PRACTICE THESE:

Perimeter = 44m

$$\text{Perimeter square} = 4 \times \text{length}$$

$$\boxed{} = 4 \times \text{length}$$

$$\text{Length} = \boxed{} \div 4 = \boxed{}$$

Length of square = $\boxed{}$

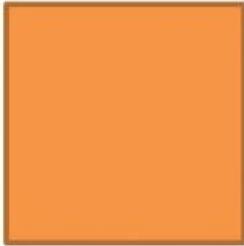

Perimeter = 28m

$$\text{Perimeter square} = 4 \times \text{length}$$

$$\boxed{} = 4 \times \text{length}$$

$$\text{Length} = \boxed{} \div 4 = \boxed{}$$

Length of square = $\boxed{}$

?m

Perimeter = 80m

Perimeter square = 4 x length

$$\boxed{} = 4 \times \text{length}$$

$$\text{Length} = \boxed{} \div 4 = \boxed{}$$

Length of square =

?m

Perimeter = 60m

Perimeter square = 4 x length

$$\boxed{} = 4 \times \text{length}$$

$$\text{Length} = \boxed{} \div 4 = \boxed{}$$

Length of square =
