Things that go!

For centuries people have been finding ways to move across the world. As time goes on, bigger and better machines are made and people get to see more places and get there faster.

Transport is to take or carry people or things in a vehicle from one place to another. Motor cars, trains and aeroplanes are all types of vehicles that are used to transport people and goods. We use transport to move around our area, our country and the world.

LIVEWORKSHEETS

Alphabetical order

Cut out the transport pictures below and paste them in alphabetical order.

LIVEWORKSHEETS

Things that go on land

There are many things that go on land. We use land transport to help us in many ways. We can use a motor car or bus to get to school. Trains and trucks help by carrying goods from one place to another. An ambulance or a fire engine is used when there is an emergency. Diggers and dump trucks are used on a building site.

1. How do you get to school everyday?

2. Name **two** vehicles from the passage, that can be used to carry goods.

3. When is an ambulance or a fire engine used?

4. Where can diggers and dump trucks be used?
