The world of work

This month: **Science**

(1) There are thousands of different jobs for scientists in the world, but there are three main types of scientist: biologist, chemist and physicist. In this article, we look at science jobs around the world.

(2) Celia is a researcher at the Sea Life Centre in southern USA. Her work is with dolphins at the moment. 'I'm a marine biologist', she says, 'because I love the sea. My job is fun and it's different every day. Of course, it's a bit scary sometimes. The sea is a dangerous place.'

(3) Guillermo and Fernando are chemists. They are with a chemical company in East Africa. They are in the Insecticide Department. 'We are industrial chemists. We are trying to get more fruit from each tree', says Guillermo. 'Some insects are good for the plants, but some insects are bad. It's hot and dirty work, but it's rewarding. I mean, it is good for our country. More fruit means more food for the people.'

(4) Martina is a physicist. Her job is in a large hospital in Russia. She is responsible for nuclear medicine, like MRI scanners. 'It's hard work and the hours are long. But the other people are great. We are a really good team.'

Who...

	Celia	Guillermo and Fernando	Martina
(1) works in the sea?	☐	☐	☐
(2) provides food for the people?	☐	☐	☐
(3) works in a very clean place?	☐	☐	☐
(4) works with a good working team?	☐	☐	☐
(5) is in contact with animals?	☐	☐	☐
(6) is in contact with insects?	☐	☐	☐
(7) works for other people's health?	☐	☐	☐
(8) is sometimes in danger?	☐	☐	☐
(9) works in the medicine area?	☐	☐	☐
(10) follows a routine?	☐	☐	☐
(11) works many hours a day?	☐	☐	☐
