

RAZONES

1. SI: $\frac{a}{b} = \frac{6}{5}$ además $a + b = 66$, hallar " $a - b$ "

$$\frac{a}{b} = \frac{6}{5}$$

$$a + b = 66$$

$$\square + \square = \square$$

$$k = \square$$

$$a = \square$$

$$b = \square$$

$$a - b = \square$$

2. SI: $\frac{x}{y} = \frac{7}{2}$ además $x - y = 35$, hallar " $x + y$ "

$$\frac{x}{y} = \frac{7}{2}$$

$$x - y = 35$$

$$\square - \square = \square$$

$$k = \square$$

$$x = \square$$

$$y = \square$$

$$x + y = \square$$

3. SI: $\frac{a}{b} = \frac{3}{4}$ además $3a + 4b = 100$, hallar " $b - a$ "

$$\frac{a}{b} = \frac{3}{4}$$

$$3a + 4b = 100$$

$$\square + \square = \square$$

$$k = \square$$

$$a = \square$$

$$b = \square$$

$$b - a = \square$$

4. SI: $\frac{a}{b} = \frac{4}{5}$ además $2b + 3a = 44$, hallar " $a \times b$ "

$$\frac{a}{b} = \frac{4}{5}$$

$$2b + 3a = 44$$

$$\square + \square = \square$$

$$k = \square$$

$$a = \square$$

$$b = \square$$

$$a \times b = \square$$
