

SAVING THE ENVIRONMENT

Two friends are talking about saving the environment. Fit the parts in the column below into the dialogue.

It just means we have to change our old habits to new ones. We also have to change the way we commute.

We can do this by separating our trash and selling it to recycling centres. Electronic items like bulbs, batteries and computers must not be mixed with other trash. They have to be disposed of properly. If possible, start composting. All vegetables and fruit waste can be put into compost. Remember, do not waste! Only buy what we really need.

We reuse our drinking bottles, use our own containers for takeaways and use our own reusable bags. We must say NO to plastic where possible.

One of the best way to help save the environment is to start conserving and reusing. We can start small by getting our families and friends to change their habits.

We can drive less. We can walk, cycle, car pool and use public transport.

We have to try and use less electricity and water to conserve our natural resources. We can use less air conditioning, switch off lights and fans when we leave the room, use energy saving LED bulbs, unplug devices which are not in use and so on.

Jane	:	What can we do to save the environment?
Steve	:	(1)
Jane	:	How can we do this?
Steve	:	(2)
Jane	:	That doesn't sound difficult.
Steve	:	It isn't (3)
Jane	:	Like what?
Steve	:	(4)
Jane	:	Yes. I agree with your point.
Steve	:	Another significant thing we need to do is recycle and reuse what we can. We must reduce plastic.
Jane	:	In our home, we do this anyway. (5)
Steve	:	That's great! We also have to reduce our waste. (6)
Jane	:	Yes. I'm glad we can each do our small part in saving our environment.
