

# Solve the problems on the p-h chart

وزارة التعليم  
Ministry of Education

## Example 1 :

For a simple refrigeration cycle represented by p – h chart below if

$h_1 = 330 \text{ kJ/kg}$   $h_2 = 355 \text{ kJ/kg}$  And  $h_3 = 225 \text{ kJ/kg}$

Calculate the following:

1. Refrigeration Effect (R.E)
2. Work Done (W.D)
3. Coefficient of Performance (C.O.P)

## Solution:

$$R.E = h_1 - h_4 \quad R.E = \boxed{\phantom{000}} - \boxed{\phantom{000}} = \boxed{\phantom{000}} \text{ kJ/kg}$$

$$W.D = h_2 - h_1 \quad W.D = \boxed{\phantom{000}} - \boxed{\phantom{000}} = \boxed{\phantom{000}} \text{ kJ/kg}$$

$$C.O.P = RE / WD \quad C.O.P = \boxed{\phantom{000}} / \boxed{\phantom{000}} = \boxed{\phantom{000}}$$
