

Evaluate and express using the distributive property:

$$7 \times 5 = \underline{\quad} \left(\underbrace{\square \times \square}_{\square} \right) + \left(\underbrace{\square \times \square}_{\square} \right)$$
$$\square + \square = \underline{\quad}$$

$$9 \times 4 = \underline{\quad} \left(\underbrace{\square \times \square}_{\square} \right) + \left(\underbrace{\square \times \square}_{\square} \right)$$
$$\square + \square = \underline{\quad}$$

$$8 \times 9 = \underline{\quad} \left(\underbrace{\square \times \square}_{\square} \right) + \left(\underbrace{\square \times \square}_{\square} \right)$$
$$\square + \square = \underline{\quad}$$

$$6 \times 8 = \underline{\quad} \left(\underbrace{\square \times \square}_{\square} \right) + \left(\underbrace{\square \times \square}_{\square} \right)$$
$$\square + \square = \underline{\quad}$$

$$9 \times 6 = \underline{\quad} \left(\underbrace{\square \times \square}_{\square} \right) + \left(\underbrace{\square \times \square}_{\square} \right)$$
$$\square + \square = \underline{\quad}$$

$$5 \times 9 = \underline{\quad} \left(\underbrace{\square \times \square}_{\square} \right) + \left(\underbrace{\square \times \square}_{\square} \right)$$
$$\square + \square = \underline{\quad}$$
