

LISTENING

A new study suggests that the more teenagers watch television, the more likely they are to _____depression as young adults. But the extent to which TV may or may not be to blame is a question that the study leaves unanswered.

The researchers used a national long-term _____of adolescent health to investigate the relationship between media use and depression. They based their findings on more than four thousand _____ who were not depressed when the survey began in nineteen ninety-five. As part of the survey, the young people were asked how many _____ of television or videos they watched daily. They were also asked how often they played computer_____and listened to the radio.

Media use totaled an _____ of five and one-half hours a day. More than two hours of that was spent watching TV. Seven years later, in two thousand two, more than seven percent of the young people had signs of _____.
