

## ROTATION OF THE EARTH AND EFFECTS OF ROTATION OF THE EARTH

The main effect of Earth's rotation is \_\_\_\_\_ and \_\_\_\_\_.

Earth takes \_\_\_\_\_ to spin.

As Earth rotates, one half receives light from the sun. In this half, it is \_\_\_\_\_.

When an area does not receive light from the sun, it is called \_\_\_\_\_.

Night and day last approximately \_\_\_\_\_.

If the Earth lasted 12 hours to spin on its axis the day and night would last only \_\_\_\_\_.
