Close-Up C1 – Unit 3 USE OF ENGLISH

Just for the Health of It

1. Read the text. Fill in the gaps with ONE suitable word.

How could I _____ got a stress fracture?

Stress fractures are small cracks in _____ normal bone, related to repeated impact, often _____ weight-bearing bones of the shin or foot, _____commonly in runners and other sportspeople.

Bone is constantly remodelling, clearing damaged bone, replacing _____, allowing adaptation to different loads. If it can't adapt quickly _____, there's an imbalance, areas of weakness or 'stress', _____ then fracture, causing persistent pain, swelling or tenderness over several weeks. They often occur _____ there's a sudden increase in physical activity or training intensity without enough rest time for the bone to adapt and remodel.

Manage by offloading the bone and resting _____ activity, allowing time to heal. You may need crutches and a walking boot. Use pain resolution as the guide to rehabilitating, and start less load-bearing exercises, and more cross training, static cycling, or swimming. Ensure good bone health _____ a balanced diet containing calcium, protein, carbs, and fats. Wear correct supportive footwear. Physio _____ help.
