Tumour

Term	Definition
	A broad group of diseases that result in <u>uncontrolled cell division</u> .
	A <u>mass of cells</u> that continue to divide an increase in number without any obvious function in the body.
	A tumour that <u>does not affect surrounding cells</u> , other than crowding them
	A tumour that interferes with the functioning of the cells around it; a <u>cancerous tumour</u>
	When cancer cells <u>break away</u> from the original tumour and <u>start another tumour</u> somewhere else in the body
	Any environmental factor that <u>causes cancer</u>
