

L'area del Rombo

Per calcolare l'area del rombo si usa la formula:

$$\text{Area} = (D \times d) : 2$$

dove D e d sono le due diagonali

Nel rombo in figura:

$$D = 6 \text{ cm}$$

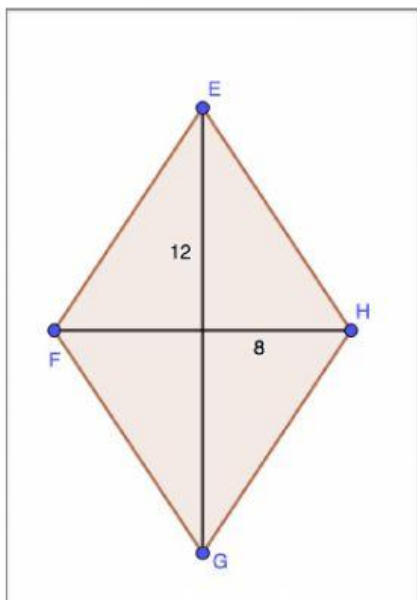

$$d = 4 \text{ cm}$$

L'area sarà allora:

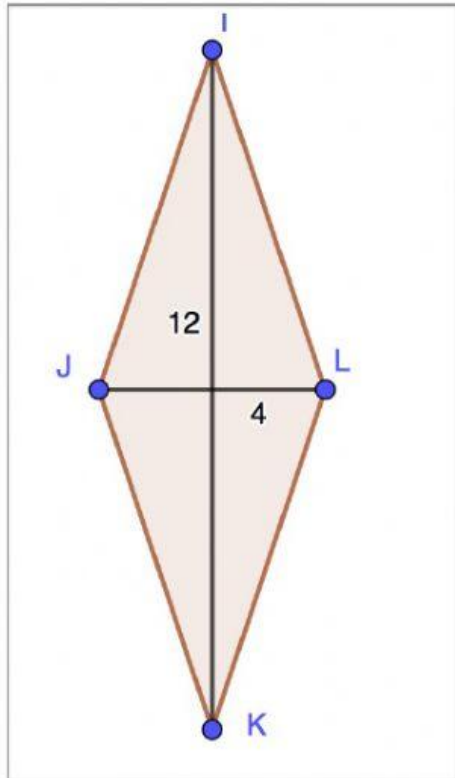

$$(6 \times 4) : 2 = 12 \text{ cm}^2$$

Ora calcola la misura dell'area di ciascun rombo

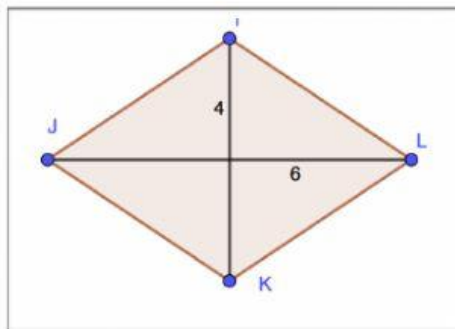

Le misure sono espresse in cm

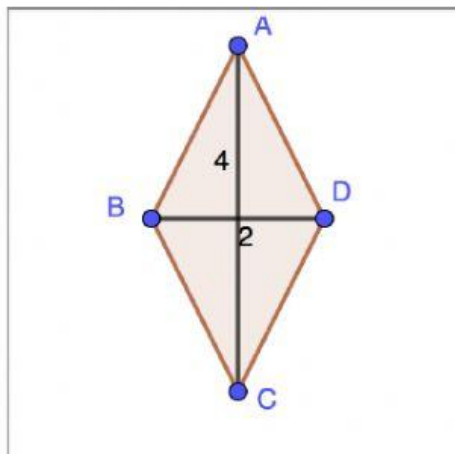

Area = _____ cm²

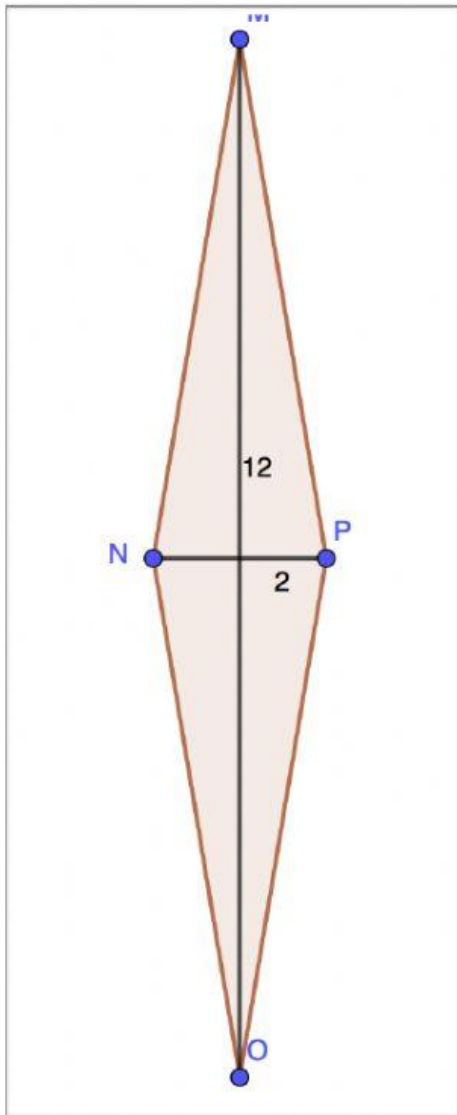

Area = _____ cm^2

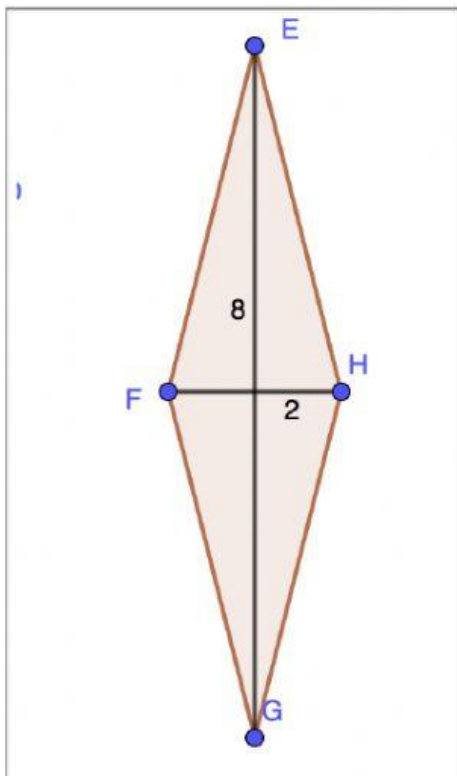

Area = _____ cm^2

Area = _____ cm^2

Area = _____ cm^2

Area = _____ cm^2
