

## 2. Planning

### Project planning

| Stages          | Description                                                                                                                                                      |
|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Programming     | This is usually a description of the requirements. Your program must meet the basic requirements to be successful.                                               |
| Testing         | Here, you will think about what you did. This will help you improve in the future.                                                                               |
| Self-reflection | This is about deciding what you need to do and when you need to do it.<br>You will also decompose the problem and create a pseudocode algorithm for the program. |
| Project brief   | Here, you will create the program using text-based programming software.                                                                                         |
| Planning        | You do this part to check that the BMI calculator program meets the basic requirements.                                                                          |
