

## Regular Polygons Math Concepts

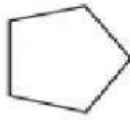

Polygons are named for the number of sides they have.

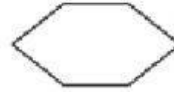

triangle

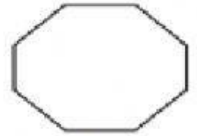

quadrilateral

pentagon

hexagon

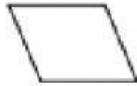

octagon

Quadrilaterals, which have four sides, can be different shapes.

rectangle

rhombus

square

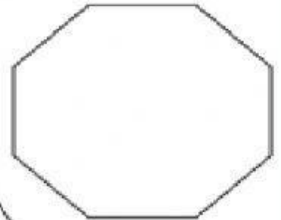

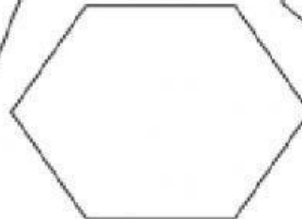

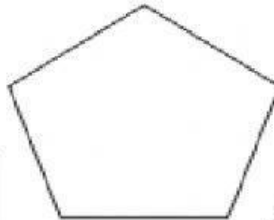

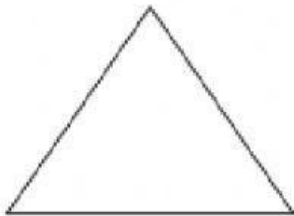

parallelogram

trapezoid

Here are 5 regular polygons.

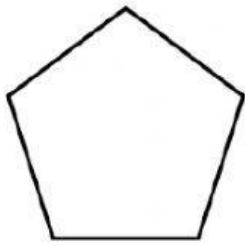

**Instructions:** Write the number of sides and angles for the polygons

| Name of Polygons | Sides | Angles |
|------------------|-------|--------|
| quadrilateral    |       |        |
| pentagon         |       |        |
| octagon          |       |        |
| hexagon          |       |        |
| triangle         |       |        |
