

BODY SYSTEMS

LISTEN AND MATCH:

The heart pumps the blood in the veins. The veins are in every part of the body.

The kidneys clean the blood and eliminate waste as urine and sweat.

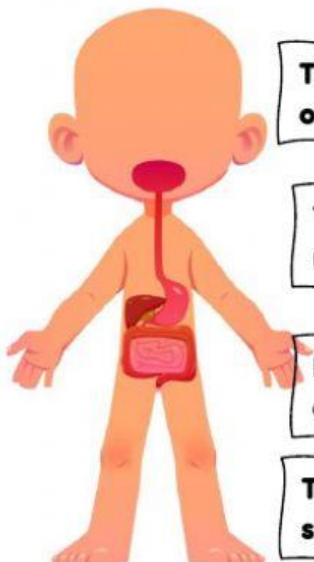

The respiratory system gets oxygen from the air.

The circulatory system transports nutrients and oxygen.

The digestive system transforms food into nutrients.

The excretory system eliminates waste.

The food goes down the oesophagus.

The intestines absorb the nutrients.

In the mouth, the teeth chew the food.

Then, it arrives at the stomach.

The air goes down the trachea.

We breathe in air by the nose or mouth.

The lungs get the oxygen we need for staying alive.
